L-keys with thermoplastic sleeve (SPKL) out of easy-to-grip circular material. The sleeve ensures that work is pleasant and easy on the fingers even at low temperatures. All L-keys are quickly to hand thanks to their colour coding and size markings. The wear-resistant clip material ensures secure storage of the L-keys as well as simple removal. For hexagonal socket screws.

### L-Keys for Hexagon Socket Screws

We questioned the classic L-key

design, since all too often the

screw head recess is rounded out,

meaning screws can no longer be

tightened or loosened - and so the

user finds the L-key slipping out of

the recess. Wera Hex-Plus tools

have a larger contact surface in

the screw head. The notching

effects are reduced and thereby

the deformation of the screws. At

the same time, as much as 20 %

more torque can be applied.

# L-keys with a thermoplastic sleeve

L-keys made from circular material fit into the hand better and allow less strenuous work over a longer period. Additionally, the rubber sleeve provides a pleasant grip, particularly in applications at low temperatures. Colour coding and large stamp enable the desired L-key to be easily located. Moreover, the round material keys are more robust, particularly where smaller sizes are concerned.

# **Hex-Plus**

Hexagon screws can endure a problem because the contact surfaces delivering the power from the conventional tool, is transferred to the screw via very small surface areas. The consequence: the screw can become damaged (rounding out). Hex-Plus tools have a greater contact surface that prevents this from happening! At the same time, as much as 20 % more torque can be applied. Good to know: Hex-Plus tools fit into every standard hexagon socket screw!

## Ball tip

The spherical drive profile means that it is possible to swivel the axis of the tool to that of the screw, and therefore enable angled, "around-the-corner" screwdriving jobs.
